PRIMARY
DEMOLITION

THE IDEAL MACHINE FOR DEMOLISHING REINFORCED CONCRETE STRUCTURES WITH HIGH PRECISIONS STANDARDS

ZATO crushers from the Galileo line are the most evolved synthesis for primary demolition of reinforced concrete. Fitted with two completely protected cylinders, Galileo series crushers enter all spaces easily without any danger of causing damage.

The wide jaw openings, combined with a market leading demolition strength, enable tackling of the most solid structures.

The Galileo series crushers are extremely fast thanks to regeneration valves fitted as standard on all machines, which speed up the opening-closing cycle.

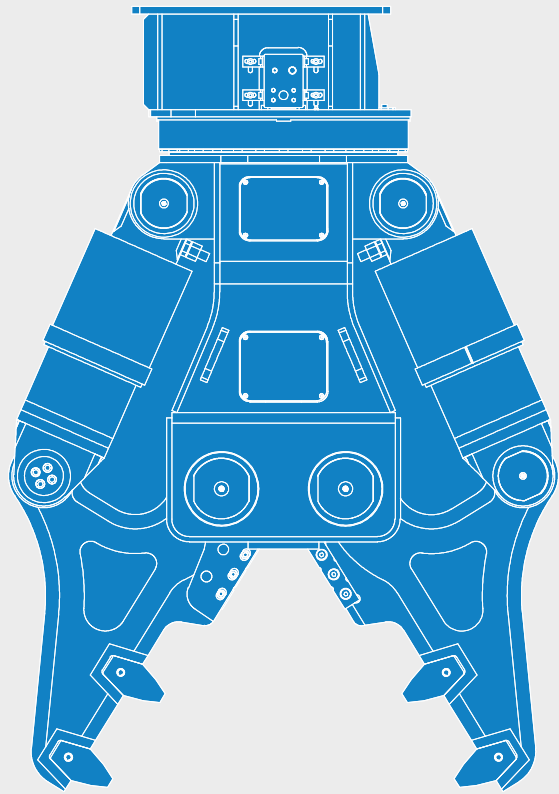

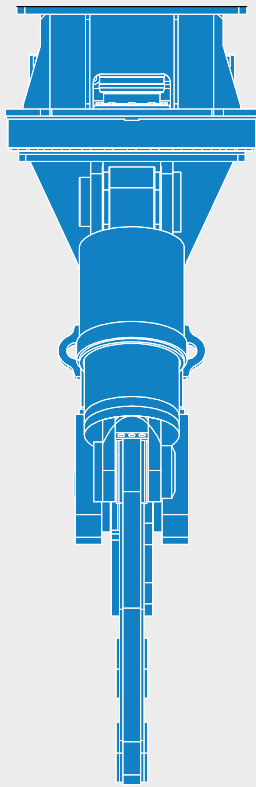

All Galileo series crushers are fitted with large blades for cutting iron reinforcing rods in the structures and interchangeable teeth for quick maintenance or refurbishment of the jaws.

For quick and easy positioning, all Galileo series crushers come with 360° hydraulic rotation as standard, but crushers can also be supplied with free rotation on request.

The use of the best materials and great proven construction ability guarantee a safe, long-lasting investment.
